DETAILED ACTION

Election/Restrictions

Claims 8-10 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in Paper No. 8.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1 and 4 are indefinite because the scope of the phrase “condition suitable to allow oxygen uptake by the yeast required for sterol and unsaturated fatty acid synthesis” is unknown.

Claims 2 and 5 are indefinite because the scope of the phrase “concentration effective to promote yeast performance” is unknown.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1761

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 4, 6 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Seebeck et al (U.S. Pat. No. 4,329,433)(hereinafter Seebeck).

Seebeck teaches a fermentation process whereby yeast is first cultured under aerobic conditions with an "enriched nutrient solution especially prepared for the culture of yeast. (Col. 2, lines 35-60). See also col. 3, lines 47-50. a "juice concentrate" is used as the nutrient solution. (Col. 3, lines 15-18). The yeast fermentation is followed by continuous fermentation under anaerobic conditions (col. 2, lines 19-25). "The fermentable solution can be any desired solution that is fermentable with yeast, . . . , although beer wort can also be fermented by the method of the invention." (Col. 5, lines 10-20).

It is considered inherent that the prior art process provides for enough aeration to allow oxygen uptake by the yeast required for sterol and unsaturated fatty acid synthesis because the claimed process is the same as that disclosed by Seebeck.

The figure shows that the yeast is removed and then returned to the fermentation tower.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sebeck in view of applicants' admissions.

Art Unit: 1761

Seebeck teaches that cited above but does not specifically disclose that the added nutrient contains zinc. While grape juice inherently contains zinc, applicants admit that the prior art has added zinc to yeast fermentations to enhance the fermentation rate. (Top of page 3 of the specification). It would have been obvious to those of ordinary skill in the art to add zinc as part of the yeast nutrients used by Seebeck because it is beneficial to the yeast fermentation rate as disclosed by applicants.
